

# Sustainable Transport

# Laws and Policies

State	One way to sustainably manage transport is by having laws on policies on transport.
Definition	This means to raise awareness and educate all road users on practicing good road safety habits to encourage use of alternatives such as public transport and other forms of active mobility.
Explanation	When there are such policies, sustainable transport is achieved because drivers will be more educated with the rules and regulations of road safety preventing mishaps and accidents on major roads.
Example	For example, Singapore implements Silver Zones in certain areas of the country so as to allow senior citizens to be safe when crossing roads and

# Integrated Transport

State	Another way to sustainably manage transport is by having integrated transport.
Definition	This refers to having a number of transport types being located together
Explanation	When there is integrated transport, sustainably can be achieved because people can easily access the transport and move across the country.
Example	For example, there is both a bus interchange, taxi stand and MRT station at Bedok Interchange.
Link	Hence, one way to sustainably manage transport is by having laws and policies on transport

# Research and Development

State	Another way to sustainably manage transport is through research and development.
Definition	This refers to improving mobility as well as having safer and more environmentally friendly transport options.
Explanation	When research and development is done and implemented, transport systems can be sustainably managed as this can help manage to ever changing environment and cope with challenges they may face.
Example	For example, electric vehicles help make transport more sustainable as it has a lower carbon footprint than normal fuel-powered vehicles.
	Hence, research and development is one way to manage transport

# Provision of a range of mobility options

State	The last way to manage transport sustainably is through the provision of a range of mobility options for different groups of people
Definition	This refers to ensuring that diverse transportation options are available to meet the varying needs of people
Explanation	When there is a range of mobility options, transport systems in Singapore can be sustainably managed as it helps provide help to different types of people to manage their daily tasks without any additional obstacles.
Example	For example, the Green Man+ scheme was implemented to give elderly pedestrians up to 13 seconds more green man time when crossing the road so they have more time to cross the road.
